

Silencer - Acoustic Dampening Case for KD-CLN-LP200S/T and Auto-Loader

(Record cleaning machine and automatic disc loader are not included.)

Klaudio's silencer is a very high quality acoustic dampening case for the [KD-CLN-LP200S](#) and [KD-CLN-LP200T](#) ultrasonic record cleaners. This version will fit an attached [KD-ATL-RCM05](#) automatic disc loader. With a substantial noise reduction down to approximately 50dBA, records can now be cleaned and dried nearby instead of in another room. The enclosure is made of heavy acrylic, steel, and brushed aluminum, and is lined with sound absorbing foam and rubber seals. Separate doors allow access to the LP record and front control panel.

To prevent humidity buildup within the enclosure, Klaudio's silencer uses an active airflow channel with intake and

exhaust fans in back. Sound is suppressed with specially designed air chambers. Fans are powered by the auxiliary power port on the rear of the ultrasonic cleaner, or with an optional AC inverter.
